***The following sections should describe how you plan to make the project data Findable, Accessible, Interoperable and Reusable (FAIR). <u>Each of the following five issues should be addressed with a level of detail appropriate to the project.</u>***

**SUMMARY** *(dataset[1] reference and name; origin and expected size of the data generated/collected; data types and formats).*

[1] *Several datasets may be included into a single DMP.*

**1. MAKING DATA FINDABLE** *(dataset description: metadata, persistent and unique identifiers e.g., DOI)*

**2. MAKING DATA OPENLY ACCESSIBLE** *(which data will be made openly available and if some datasets remain closed, the reasons for not giving access; where the data and associated metadata, documentation and code are deposited (repository?); how the data can be accessed (are relevant software tools/methods provided?).*

**3. MAKING DATA INTEROPERABLE** *(which standard or field-specific data and metadata vocabularies and methods will be used).*

**4. INCREASE DATA RE-USE** *(what data will remain re-usable and for how long, is embargo foreseen; how the data is licensed; data quality assurance procedures).*

**5. ALLOCATION OF RESOURCES and DATA SECURITY** *(estimated costs for making the project data open access and potential value of long-term data preservation; procedures for data backup and recovery; transfer of sensitive data and secure storage in repositories for long term preservation and curation).*
